

# Appendix: Lookup Lists

Three basic types of lookup lists are supported in the AT:

1. Lookup lists in which all values can be modified. Lists of this type will ship with selected values. However, all values can be deleted and replaced without impacting operation of the application
2. Lookup lists in which all values cannot be modified. Lists of this type will ship with the required values. Modification will be prohibited as values are necessary for correct operation of the application
3. Lookup lists comprised of both required and modifiable values. Lists of this sort will ship with all required values and selected modifiable values. Modification of the required values will not be permitted. Attempts to modify them will prompt an error message / explanation.
